

# EL Lamp Driver Demoboard

## General Description

The Supertex HV859DB1 demoboard contains all the necessary circuitry needed to demonstrate the features of the HV859 EL lamp driver.

Simply connect it to a power supply and an EL lamp. For additional assistance in designing EL driver circuits, please refer to application notes ***AN-H33 (the effect of external components on performance of Supertex EL drivers)*** and ***AN-H43 (EL lamp driver circuits to reduce audible lamp noise)***.

## Specifications

Parameter	Value
Input voltage:	1.8 to 5.0V
Typical supply current:	25mA
Lamp size range:	up to 5.0in <sup>2</sup>
Lamp frequency:	204Hz
Converter frequency:	80kHz

## Board Layout and Connection Diagram

Actual Dimensions = 12mm x 12mm

### Connections:

### EN - Enable Input

Enables/Disables the lamp driver. A logic high (connect to  $V_{DD}$ ) enables the driver, and a logic low (connect to GND), disables the driver. This input can be connected to a mechanical switch, or to a logic circuit output that has a source impedance of less than 20k $\Omega$ .

**V<sub>DD</sub> - IC Supply**

Supplies the HV859 EL driver IC. The supplied circuit is optimized for 3.0V operation. The operating range can be from 1.8V to 5.0V. Connect to the positive terminal of a power supply.

**V<sub>IN</sub> - Inductor Supply**

**V<sub>+</sub>** Supplies the high voltage power converter. Connect to the positive terminal of a power supply.

## GND - Circuit Ground

Connect to the  $V_{DD}$  and  $V_{IN}$  negative terminals. Supply bypass capacitors for both  $V_{DD}$  and  $V_{IN}$  are provided on the demo board. External supply bypass capacitors are not required.

### V<sub>A</sub> and V<sub>B</sub> - Lamp Connections

Connect to an EL lamp. Polarity is irrelevant.

**Note:**

*Make sure all the above connections are made before powering up the supply voltages.*
