### General Description

The Supertex MD1211 is a high speed dual MOSFET driver. It is designed to drive high voltage N and P-channel MOSFET transistors for medical ultrasound and other applications requiring a high output current for a capacitive load. The high-speed input stage of the MD1211 can operate from 1.8 to 5.0V logic interface with an optimum operating input signal range of 1.8 to 3.3V. The level translator uses a proprietary circuit, which provides DC coupling together with high-speed operation.

### Applications

- ▶ Medical ultrasound imaging
- ▶ Piezoelectric transducer drivers
- ▶ Nondestructive evaluation
- ▶ PIN diode driver
- ▶ High speed level translator
- ▶ Clock/line drivers

## Absolute Maximum Ratings

Parameter	Value
Logic supply voltage	-0.5V to +5.5V
Main supply voltage	-0.5V to +13.5V
Logic input levels	-0.5V to $V_{LL} + 0.5V$
Maximum junction temperature	+125°C
Storage temperature	-65°C to +150°C
Operating temperature	-20°C to +85°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.
